Re: Application for **[Role Title]**

Hi [Hiring Manager / Team Name],

I'm writing to express my interest in joining [Company Name] as a [Role Title]. My love for programming started in 11th standard at a government school in Tamil Nadu, where a teacher first showed me what code could do, and I spent the next years teaching myself software engineering on a 2GB RAM state-issued laptop. That obsession with building real software carried me from converting a college internship into a full-time engineering role in under 3 months (Skematix) to rising from Senior Engineer to Principal Software Engineer (HOD Digitals), leading enterprise deliveries at Heady, and now serving as a Staff Engineer at Tuna Software Solution and Lead Software Engineer (Part-Time Contractor) at Science & Humans.

Across 7+ years of engineering, I've gravitated toward owning hard problems end-to-end—from product discovery and module estimation with Product Managers to frontend UI, backend microservices, and production DevOps. At Science & Humans, I contributed from the ground up: architecting the entire authentication, RBAC authorization, and notification systems, setting up the microservices communication layer, mentoring junior engineers, and configuring deployments on Kubernetes (K8s). At Heady, I delivered the Chuck E. Cheese customer experience web MVP solo in 2 months (compressing an 8-month estimate by 75%), and at Tuna Software Solution, I engineered an Android IoT retail kiosk (Pony Up) with payment terminals and receipt printers before leading its cloud web migration.

Beyond my day-to-day roles, I'm a relentless product builder and educator. I founded StrawHatDevs (strawhatdevs.com), where I've published 200+ programming and architecture videos on YouTube, and independently architected production platforms including ChimeFlow (a multi-tenant omnichannel notification & cadence engine), ENVault (a zero-knowledge encrypted .env sync platform with a native Go CLI), and IncidentLens AI (an evidence-grounded incident triage & Runbook RAG investigator). Building and teaching at this depth has shaped how I write clean code, reason about trade-offs, and help engineering teams ship faster without fragile complexity.

I admire the engineering culture and product vision at [Company Name], and I would love the opportunity to discuss how my end-to-end full-stack, microservices, and Kubernetes/cloud experience can help your team build and ship resilient software.

Thank you for your time and consideration.

Warm regards,

Santheepkumar Veerasamy
Staff / Lead Software Engineer & Full-Stack Cloud Architect
