LinkedIn Profile Optimization — Santheepkumar Veerasamy

Tailored for Technical Recruiters, Hiring Managers, and Engineering Leaders across Principal, Staff, Tech Lead, Forward Deployed, and Senior Software Engineer roles.

1. HEADLINE OPTIONS

- **Option A (Recommended):** `Staff / Lead Software Engineer | Full-Stack, Microservices & Kubernetes (React, Next.js, Node.js, NestJS, Go, AWS) | Creator of StrawHatDevs (200+ Tech Videos), ChimeFlow & ENVault`
- **Option B (Architect Focus):** `Staff Software Engineer & Systems Architect | End-to-End Full-Stack, Microservices & Cloud/K8s | Building StrawHatDevs (200+ Videos), ChimeFlow & ENVault | Ex-Heady, Principal Eng`
- **Option C (Velocity Focus):** `Lead Full-Stack & Cloud Architect | 0-to-1 Systems, Microservices, Auth/RBAC & Kubernetes | Shipped 8-Month Enterprise MVP in 2 Months | Founder @ StrawHatDevs (200+ Videos)`

2. AUTHENTIC "ABOUT" SECTION (YOUR REAL STORY)

> My programming journey didn’t start in a Silicon Valley lab—it started in an 11th-standard classroom at a government school in Tamil Nadu, where a computer science teacher showed us a few lines of code and what they could actually do. That single class planted a seed. In 12th standard, I received a state-scheme laptop with 2GB of RAM and no SSD. Slow as it was, that machine became my window into software engineering: I spent hours on Google and YouTube teaching myself how to build things from scratch.
>
> In college (Computer Science & Engineering), I quickly realized that memorizing theory for exams wasn't real engineering. Inspired by seniors who took me to developer conferences in my second year, I went all-in on building real software. In 2019—while still in college—I joined Skematix Technologies as a Software Engineer Intern. Within 2–3 months, I converted to a full-time engineer because programming wasn't just a job to me; I was obsessed with how fast I could learn and ship.
>
> Over the past 7+ years, that same obsession has driven every step of my career:
> • Fast-Tracked to Principal Engineer (HOD Digitals): Joined as a Senior Frontend Engineer contributing to Project Gen and quickly earned promotion to Principal Software Engineer, architecting full-stack e-commerce platforms, mobile apps, and cloud systems.
> • High-Velocity Enterprise Delivery (Heady): Led engineering for tier-1 brands including

HeyDay Skin Care, The Lash Lounge, and Chuck E. Cheese—where I solo-architected and shipped a customer-facing web platform MVP in just 2 months (compressing an 8-month estimate by 75%).
• End-to-End Staff & Lead Ownership (Tuna Software Solution & Science and Humans): Currently, as a Staff Engineer at Tuna, I architected the Pony Up Android IoT retail kiosk (integrating payment terminals, receipt printers, and cash drawers) and led its cloud web migration. Concurrently, as a part-time Lead Software Engineer contractor at Science & Humans, I built core systems from the ground up—owning authentication & RBAC authorization, the notification engine, microservices communication layers, and Kubernetes (K8s) DevOps deployments while mentoring junior engineers and partnering with PMs on module estimation.

Because I'm a builder at heart, I don't stop coding after work. I build and ship my own production products:
‣ StrawHatDevs (strawhatdevs.com) — An interactive developer learning platform I built from scratch, paired with 200+ programming and system architecture videos on YouTube.
‣ ChimeFlow — A multi-tenant omnichannel notification & cadence orchestration platform (Bun, SvelteKit, PostgreSQL 17, SendGrid, Twilio, FCM) with a write-ahead ledger and fair-claim worker queues.
‣ ENVault (envault.strawhatdevs.com) — A zero-knowledge client-encrypted .env & secret sync platform with a native Go CLI integrated with macOS Keychain, Windows Credential Manager, and Linux Secret Service.
‣ IncidentLens AI — An evidence-grounded multi-tenant incident investigator with PostgreSQL Hybrid FTS Runbook RAG, AES-256-GCM redaction, and a 35-case AI evaluation harness.

Core Stack:
• Frontend: React, Next.js, TypeScript, SvelteKit, React Native, Expo, Tailwind CSS
• Backend & Systems: Node.js, NestJS, Go (Golang), Bun, Express, Microservices, Auth/RBAC, Notification Engines, REST, GraphQL
• Data & Queues: PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ, Supabase, Drizzle, TypeORM
• Cloud & DevOps: Kubernetes (K8s), Docker, AWS, GCP, GitHub Actions, Bitbucket Pipelines, Vercel, Playwright

If you're a hiring manager, tech lead, or recruiter looking for an engineer who can take a complex product from a blank repo all the way to Kubernetes production infrastructure—let's connect: devsantheep@gmail.com
